

HOW MACHINES WORK

WRITE A SKETCH AND EXPLAIN HOW MACHINE WORKS

Some technical things are difficult to explain to non-technical people. That is why you should use some tricks to do that.

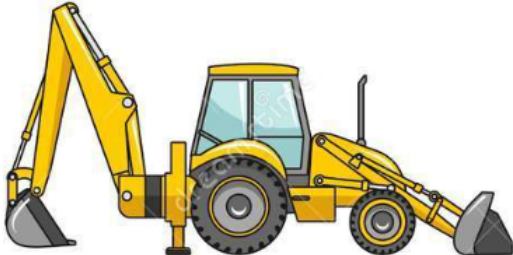

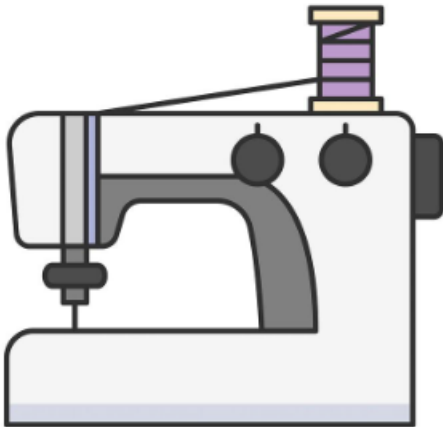

On the second page you should choose a machine and **make a sketch** to explain briefly how it works, you can also watch a video for more understanding

As usual you can use <https://app.diagrams.net/> and search some mechanical components or hand drawn designs. For motivated people <https://www.onshape.com/fr/>
